

## BONDAL ER

Bondal ER Panel is an aluminum sandwich panel. Due to the aluminum honeycomb core an extraordinary stability can be combined with a very low weight. The added thin anti drumming layer guarantees the high damping.

It is easily possible to use large dimension panels. The rigid it of panel also makes it easy to work with a low number of support frames behind the panel. A support distance of 1.250 mm is possible.

**Size:**  
3000x 1250 mm MAX

**Thickness:**  
Max to 40 mm

**Weight:**  
6,1 kg/m<sup>2</sup> @ 7 mm thickness
